I. Fuji Electric's Policy for Controlled Substances

Controlled substances in "4. Evaluation items", "(3) Measures related to content of chemical substances in supplied materials" of "II. Fuji Electric's Green Procurement Concept Guideline" in Fuji Electric's Green Procurement Guideline (Main) are determined according to the following.

1. Prohibited substances

This category determines what must not be contained in delivered materials including substances that are prohibited from being used and manufactured according to domestic and overseas laws, regulations and treaties, and substances that are prohibited from being used by Fuji Electric. For more information about particular substances, refer to "II. List of Prohibited Substances".

2. Conditionally prohibited substances

Among the substances that are prohibited from being used and manufactured according to domestic and overseas laws, regulations, and treaties, and substances that are prohibited from being used by Fuji Electric, these substances have application exclusions for their prohibition depending on the usage, content conditions, and content location. This category determines what must not be contained in materials excluding cases that apply to the application exclusion items determined in "VI. Fuji Electric's concept of exempted used for controlled substances" in this document. For more information about particular substances, refer to "III. List of Conditionally Prohibited Substances".

3. Voluntary controlled substances

The following substances are those that Fuji Electric has judged as highly important to monitor their contained in products based on domestic and international laws and regulations, treaties, and industry initiatives. The content of these substances will be monitored only when they are "intentionally added".

- Substances scheduled to be added to the Stockholm Convention (POPs)
- Substances that are being considered for future prohibition under the RoHS directives, etc.

For specific target substances, please refer to "IV List of Voluntarily Controlled Substances".

4. Declarable substances

Fuji Electric is required to monitor the content of these substances in its products in accordance with domestic and international laws and regulations, treaties, and industry initiatives.

(1) Substances to be controlled by chemSHERPA

Please refer to chemSHERPA's website for specific substances.

Website : <https://chemsherpa.net/tool#declarable>

- * The most recent version of the target substances from the above organizations will be given priority. Please note that there are substances that overlap with the above four categories of "Prohibited Substances" and other substances, but please report their content separately. Please refer to "[Attachment 2] Reported Data on Contained Substances" in this document for the format of the report.

- (2) Supplemental Information: Standards and organizations that target declared substances
- chemSHERPA (A scheme that facilitates sharing information on chemical substances in products)
Scheme created at the initiative off the Ministry of Economy, Trade and Industry, integrating JAMP and the former JGPSSI.
A common scheme that can be used throughout the supply chain to properly manage chemical substances contained in products and to continuously comply with expanding regulations.

 - JAMP (Joint Article Management Promotion-consortium)
This is an organization established for promoting proper management and smooth information disclosure of chemical substances contained in products for the whole industry and whole supply chain in addition to the electric and electronic equipment industries. As with JIG, there are common standards for “Chemical substances that must be controlled” and “Survey answer format for information distribution”.

VI. Fuji Electric's concept of exempted used for controlled substances

Some prohibited substances are excluded from application according to their use by laws and regulations. Fuji Electric also has exempted applications for "Conditionally Prohibited Substances". Fuji Electric has the following three categories of exempted applications. Whether or not the exemptions can be applied to material items supplied by suppliers is specified by the business division of Fuji Electric that requested the survey.

In some cases, the applicable expiration date may be set before the expiration date in consideration of the expiration date applicable to Fuji Electric. In this case, each business division of Fuji Electric that requested the survey will specify the applicable expiration date.

1. Application Exclusion Items Group A

This is an exempt use of Annex 3 to Directive 2011/65/EU of the European Parliament and of the Council (EU-RoHS2) and applies to all materials in this category.

Please be sure to check the website of the European Commission at the following URL for the latest contents of the exemptions use group A.

https://environment.ec.europa.eu/topics/waste-and-recycling/rohs-directive/implementation-rohs-directive_en

2. Application Exclusion Items Group B

It applies to materials that constitute Fuji Electric products that are exempt from UR-RoHS2 Annex 4, fall under this category, and are incorporated in categories 8 and 9 of EU-RoHS2 without exception, or fall under these two categories without exception.

Please be sure to check the website of the European Commission at the following URL for the latest contents of the exemptions use group B.

https://environment.ec.europa.eu/topics/waste-and-recycling/rohs-directive/implementation-rohs-directive_en

3. Application Exclusion Items Group C

It is an application (essential use) for which the use of controlled substances under the Chemical Substances Control Act is exceptionally permitted pursuant to Section 3 of the Supplementary Provisions of the Enforcement Order.

No.	Contents

1	Production of Etching Agent (Limited to those used in the manufacture of compound semiconductors that enable piezoelectric filters or radio equipment to transmit and receive radio waves with a frequency of 3 megahertz or more)
2	Production of resist for Semiconductor
3	Production of Professional Photographic Film

4. Supplement to EU-RoHS2: Categories of electrical and electronic equipment to which EU-RoHS2 applies

Categories	Eligible electrical and electronic equipment	Categories	Eligible electrical and electronic equipment
1	Large household electrical appliances	7	Toys, leisure and sporting goods
2	Small household electrical appliances	8	Medical device
3	IT and telecommunications equipment	9	Monitoring and control equipment including industrial applications
4	Consumer equipment	10	Vending machine

Non-Content Certificate

This is to certify that materials this company supplies to the Fuji Electric, that is, "purchases which directly constitute Fuji Electric products, such as raw materials, parts, products, equipment, subcontracted goods such as manufacturing, processing, repair, etc. (including accessories, packaging, and all other items delivered with the products), and substances suspected to remain in raw materials and parts used in manufacturing processes do not contain the following "prohibited substances" and "conditionally prohibited substances."

In addition, we report on the "Voluntarily Controlled Substances" in the table below for which we have confirmed intentional addition.

* Details related to "Prohibited Substances" and "Conditionally Prohibited Substances" and "Voluntarily Controlled Substances" are according to Appendix II.

Materials that certify not to contain prohibited substances and conditionally prohibited substances will be listed in the "List of Materials Subject to Non-Content Certificate", along with voluntarily controlled substances whose intentional addition is confirmed.

If prohibited substances or conditionally prohibited substances are detected in violation to the above, resulting in damage to Fuji Electric for handling the damage, we sincerely respond to it.
