

## Status of the achievements for the main environmental targets

In order to realize Environmental Vision 2050, which is a guidepost for our medium-to-long-term environmental activities, we conduct annual evaluations of specific targets to promote our environmental activities.

○:Target

Environmental Vision 2050	Indicator	FY2020 Performance	FY2021 Target	Unit
Achieve a Decarbonized Society	Greenhouse gas emissions throughout the supply chain	57 (million tons)		(million tons)
	Reduce greenhouse gas emissions during production	437 (kilotons)	Less than 460 (kilotons)	(kilotons)
	Reduce CO <sub>2</sub> emissions through products	41,275 (kilotons-CO <sub>2</sub> /Year)	More than 36,000 (kilotons-CO <sub>2</sub> /Year)	(kilotons-CO <sub>2</sub> /Year)
Recycling-Oriented Society	Ratio of waste sent to landfill	1.8%	Less than 1.5%	(%)
	Water intake per unit of net sales	150 (tons/million yen)	Less than 180 (tons/million yen)	(tons/million yen)
Society that is in Harmony with Nature	Amount of Emissions of VOC Atmospheric Emissions	819 (tons)	Less than 1,694 (tons)	(tons)

(Note)

- Fuji Electric's environmental performance targets are the factories in Japan and consolidated production subsidiaries outside Japan.
- Fuji Electric's environmental performance aggregation targets are the sites that have obtained or are preparing to obtain ISO 14001 certification.
- Environmental performance coverage rate: 99.6% of sites covered by employee ratios. The aggregation range is equivalent to 95.3% of the entire Group (percentage figures refer to our environmental management activities aggregated).
- The final waste ratio targets for fiscal 2021 were achieved by Japanese domestic operations while unachieved by operations outside Japan.
