## Ideal for reversing 3-phase induction motors

## Features

- Designed for the forward-reverse operation and plugging stop of 3 -phase induction motors.
- Mechanical interlock mechanism provided
- Snap-on 35 mm top hat rail mounting

Reversing contactor SC-E3RM

## Types and ratings

- AC operated

Notes: • Ratings conform to IEC standard

- The above types are shipped in a set containing two magnetic contactors, one SZ-RM mechanical interlock unit, two front mounting auxiliary contact blocks, and electrical interlock wiring. The power connection kit for the reversing contactor is sold separately.
- To prevent short-circuit faults when using SC-E02RM to SC-E04RM types for high-speed switching, provide a time delay relay or other electrical interlock to ensure that the switching time is 15 ms min .
* Equipped with the SZ-A11/T, SZ-A02/T, SZ-A31/T, or SZ-A22/T front mounting auxiliary contact block.

## - DC operated

DC reversing magnetic contactors are also available.

- Power connection kits for reversing

# New power supply terminal covers allow UL508 Type E and UL508 Type F applications for MMSs 

## Features

- Combining the BZOTCRE power supply terminal cover and BZOTKUAB short-circuit alarm contact block in a FUJI BM3R series manual motor starter (MMS) allows it to be used as a manual self-protected combination controller (Type E combination motor controller). In the BM3V series, the BZOTCRE power supply terminal cover is not necessary to fulfill the UL489 insulation distance requirement.
- Combining the BZOTCRE power supply terminal cover and BZOTKUAB short-circuit alarm contact block in a combination starter formed by a BM3R MMS and an SCseries magnetic contactor allows it be used as a selfprotected combination controller (Type F combination motor controller). In the BM3V series, the BZOTCRE power supply terminal cover is not necessary to fulfill the UL489 insulation distance requirement.

## Type E advantages

- Since the Type E can be used for branch circuit protection (BCP) as stipulated in NEC 430.52(c)(6), there is no need to provide upstream UL489-approved BCPs as short-circuit protection for motor branching circuits. Ordinarily, a separate BCP is necessary for each motor.
- It takes up less space inside the control panel. Note: Using Type E to eliminate the need for a BCP applies only to motor load circuits. It cannot be applied to other loads, such as resistance load and lamp load circuits.

Power supply terminal cover BZOTCRE

MMS with BZOTCRE

## Type F advantages

- By including a compliant MMS in the Type E and applying it as a BCP as stipulated in NEC 430.52(c)(6), there is no need to provide upstream UL489-approved BCPs as shortcircuit protection for motor branching circuits. Ordinarily, a separate BCP is necessary for each motor.
- It takes up less space inside the control panel. Note: Using Type F to eliminate the need for a BCP applies only to motor load circuits. It cannot be applied to other loads, such as resistance load and lamp load circuits

## Type: BZOTCRE

Dimensions, mm

## Integrated operator/contact block improves reliability.

## Features

- Reliability of safety functions increased by integrated operator/contact block construction.
- LED ( 24 V AC/DC) and neon (110V, 120V, 220V, 240 V AC) illuminated types available, with interconnected lamp circuit that turns the lamp on when the contacts are closed.
- White arrow on red button clearly indicates push-lock/turnreset direction.
- Combination of AU-flashed Ag contacts and sliding mechanism ensures high contact reliability.
- Terminal cover for protection degree IP2X increases worker safety by preventing fingers from accidentally touching charged parts.
- FUJI original trigger action mechanism stops contacts from operating until the button is locked, to prevent accidental pressing by a person or object.
- Forced contact opening mechanism securely breaks the circuit even during errors, such as the partial welding of 1NC contacts.
- Conforms to international standards, including UL/CSA and EN European Standards (TÜV), and bears CE markings.

## New design with high-brightness LED and self-lifting terminal improves safety and working conditions.

## Features

- Employs high-brightness LED
- New LED lamp significantly reduces power consumption and mass.
- Reduces wiring work and improves safety by integrating the FUJI self-lifting terminal (quick mounting terminal) and terminal cover
- LED lamp incorporates a circuit to prevent lighting errors.
- Modular design of LED unit allows easy changes in colors and color arrangement (two- and three-split rectangular illumination faces).
- Can be used with film legend plates.
- Ideal for side-by-side mounting

Types and ratings

- DP36 series (LED lamp)

[^2]- DP36S1N, T1N and T2N with check terminals are also available.
- DP40 series (LED lamp)

## Further improving the efficiency and ease of wiring and inspections

## Features

- Transparent terminal cover allows the wiring configuration to be checked externally.
- Slotted hexagon head bolts that can be tightened with screwdrivers or box wrenches are used for the terminals.
- The line side and load side are provided with hinged terminal covers to ensure safety and allow easier maintenance and inspections.
- cUL approved, file No. E45457

SKT14A-3C to SKT100A3C only.

## Isolated AC transducers with a thin profile and excellent cost performance

## Features

FUJI WT2 AC voltage and current transducers convert AC voltage/current into DC voltage/current, and also isolate input/ output circuits and power supplies.

- Select from an 85 to 264 V AC, 24V DC, or 110V DC control power supply
- Three isolated ports: input, output, and power supply
- Use either IEC 35 mm rail mounting or screw mounting
- Screw terminals with cover ensure safe, sure connection.

## Specifications and performance

## - Performance

Accuracy: $\pm 0.4 \%$ FS
Temperature characteristic: $\pm 0.2 \% / 10^{\circ} \mathrm{C}$ FS(Typical)
Response time: 0.5 s max. ( 0 to $90 \%$ )

Wiring diagram

## Addition of 20kA models absorbing inductive lightning surges from power supply

## Features

- Coordinated operation of 2 types of varistors enables extremely fast response to surges and a high level absorption.
- Built-in thermal fuses prevent problems such as short-circuit due to deterioration of elements.
- Indicators for easy confirmation of device status
- Integrated terminal construction reduces space and wiring requirements for easier handling of the arrester.
- Standard-feature terminal cover to protect against electrical shock

## Application

- Electronic devices, such as computers, measurement devices, and communications devices
- Inverters and UPSs
- Electronic devices inside distribution boards (e.g., power distribution boards and lighting distribution boards)

Panel drilling

# AC power distribution monitoring unit for one feeder, F-MPC04 series 

# Digital multimeters - all of the measurement functions for AC power distribution monitoring in a single unit 

## Features

A wide variety of output functions to select from for preventive maintenance

- Power alarm/current prealarm output provided
- Electric energy pulse signal provided
- Leakage current alarm, leakage current prealarm output (with leakage current measuring function only)

Capable of measuring inrush current of equipment such as welders

- High-speed sampling and calculation of voltage and current

Compact design allows installation almost anywhere.

- Space-saving construction simplifies installation.
- Monitors individual equipment, sections, and the entire floor

Networking capability

- External interface uses RS-485 communications.
- Can be connected to the same electric power distribution system as other F-MPC (04, 04P, 30, 60B series) products

Types and functions

| Function | Type |  |
| :--- | :--- | :--- |
| Leakage current measuring <br> function | Not provided | UM03-ARA3 |
|  | Provided | UM03-ARA3G |

## System configuration

## Specifications

- General

| Applicable circuit | 3-phase 3-wire: 2-CT, single-phase 3-wire: 2-CT, single-phase 2-wire: 1-CT |
| :---: | :---: |
| Control power supply | 100 to 200V AC ( 85 to 264 V AC) $50 / 60 \mathrm{~Hz}(45$ to 66 Hz ) |
| Inrush current | $15 \mathrm{~A}, 3 \mathrm{~ms}$ or less (at $110 \mathrm{~V} \mathrm{AC}, 50 \mathrm{~Hz}$ ) $30 \mathrm{~A}, 3 \mathrm{~ms}$ or less (at $220 \mathrm{~V} \mathrm{AC}, 50 \mathrm{~Hz}$ ) |
| Control power consumption | Approx. 7VA (at 220V AC) Approx. 5VA (at 110V AC) |
| $\begin{array}{ll}\text { Short-time overload } & \begin{array}{l}\text { Current input circuit } \\ \text { resistance }\end{array} \\ \text { Voltage input circuit }\end{array}$ | Max. 20 times setting value, 9 times for 0.5 s Max. 2 times setting value, 9 times for 0.5 s |
| Vibration | 10 to 58 Hz 0.075 mm (one-way amplitude) |
| Shock | $300 \mathrm{~m} / \mathrm{s}^{2}$, in each $\mathrm{X}, \mathrm{Y}$, and Z directions, 2 times |
| Withstand voltage / Insulation resistance (500V DC megger) | $2 \mathrm{kV} / 10 \mathrm{M} \Omega$ Between power supply terminals connected together and other terminals connected together $2 \mathrm{kV} / 10 \mathrm{M} \Omega$ Between measurement input terminals connected together and other terminals connected together $2 \mathrm{kV} / 10 \mathrm{M} \Omega$ Between alarm output terminals connected together and other terminals connected together $500 \mathrm{~V} / 10 \mathrm{M} \Omega$ Between watthour pulse output terminals connected together and other terminals connected together |
| Ambient temperature | Operating: -10 to $+55^{\circ} \mathrm{C}$ Storage: -20 to $+70^{\circ} \mathrm{C}$ |
| Humidity <br> Atmosphere <br> Grounding <br> Allowable power interrupting time | 20 to $90 \%$ RH (no condensation) <br> Free from corrosive gases and excessive of dusts Grounding resistance of $100 \Omega$ or less 20 ms (unit will continue operation) |

- Measurement

| Item | Effective measurement range | Display | Accuracy |
| :---: | :---: | :---: | :---: |
| Current, demand current Max. demand current value | - With split toroidal CT (200A AC) * $0,0.4 \%$ of $\ln (0.8 \mathrm{~A})$ to 300 A <br> - With split toroidal CT (400A AC) * $0,0.4 \%$ of $\ln (1.6 \mathrm{~A})$ to 600 A <br> - With small split toroidal CT (5A) * $0,0.4 \%$ of $\ln (0.2 \mathrm{~A})$ to 50 A 0 , to 1.5 times CT rating (for 5 A ) <br> - Demand time setting: 0,1 to 15 min (by 1 min stepped ) <br> 30 min setting: Available | 4-digit | R- and T-phase: $\pm 1.5 \%$ FS S-phase: $\pm 2.5 \%$ FS |
| Demand value and max. demand value of higher harmonic current |  | 4-digit | $\pm 2.5 \%$ FS |
| Demand active power Max. demand active power value |  | 4-digit | $\pm 1.5 \%$ FS |
| Reactive power |  | 4-digit | $\pm 3 \%$ FS |
| Power factor |  | 3-digit | $\pm 5 \%$ FS Converted into a phase angle of $90^{\circ}$ |
| Active electric energy |  | 5-digit | Equivalent to JIS standard class |
| Reactive electric energy |  | 5-digit | $\pm 5 \%$ |
| Voltage | Converted into an input voltage 60 to 264 V AC | 4-digit | Vu-v and Vw-u: $\pm 1.5 \%$ FS, Vv-w: $\pm 2.5 \%$ FS |
| Frequency | 45 to 66Hz | 3-digit | $\pm 0.5 \%$ FS |
| Leakage current (l/o /lob) Max. demand value | 0, 10 to 1000 mA | 4-digit | $\pm 2.5 \%$ |

Note: New model CTs, see page 20.

## - Output

| Item | UM03-ARA3 | UM03-ARA3G | Specification |  |

Front panel

Dimensions, mm

Mass: Approx. 400g

## - Terminal layout

Note: Alarm output terminal(2) (3) and ZCT input terminal (1)(2) of the UM03-ARA3 (without leakage current measuring function) are NC terminals. Do not connect anything to these terminals.

## New split toroidal type current transformers/CC2D

## Features

Designed for even easier handling. Line-up includes types designed specially for FUJI multiple function protectors and controllers (F-MPC), and types for use with other instrumentation.

- Improved design enables easier mounting.
- Large $\mathrm{K} \rightarrow$ L display allows easier identification of primary conductor direction.
- Hook attached makes it easier to secure the primary conductor with a retaining band.
- Built-in clamping diode (on all types except the CC2D81) CT secondary wiring will not burn out even with the contact open.

## Types and ratings

Please use substituting models.

## AS-Interface Waterproof connector-type slave module FM6D, FM6B

| - Slaves | Discontinued | Substitute | ■ Time of discontinuation: March 2004 |
| :---: | :---: | :---: | :---: |
|  |  |  |  |
| 4-input (NPN) | FM6D-40XXN | FM6D1-40XXN |  |
| 4-output (NPN) | FM6D-04TNX | FM6D1-04TNX |  |
| 2-input/2-output (NPN) | FM6D-22TNN | FM6D1-22TNN |  |
| - Slave bases |  |  |  |
| Pressure welding connection | FM6B-04FK <br> FM6B-04FE | FM6B1-04FK <br> FM6B1-04FE | information substituting models. |
| Screw terminal connection | FM6B-04PG | None |  |

## AS-Interface Power supply FP1B-JNW213

|  | Discontinued | Substitute |  |
| :---: | :---: | :---: | :---: |
| - For communications/external aux. power supply | FP1B-JNW213 | None | - Time of discontinuation: February 2004 |

## AS-Interface DeviceNet/AS-i gateway FC2L-DL

- Conversion capsule $\frac{\text { Discontinued }}{$|  FC2L-DL  |
| :---: |
|  (Version2.0)  |}$\Rightarrow \frac{\text { Substitute }}{\text { FC2LA-DL }}$ (Version2.1) $\quad$ Hardware and software are compatible.

Time of discontinuation: March 2004

## Safety Considerations

- For safe operation, before using the product read the instruction manual or user manual that comes with the product carefully or consult the Fuji sales representative from which you purchased the product.
- Products introduced in this catalog have not been designed or manufactured for such applications in a system or equipment that will affect human bodies or lives.
- Customers, who want to use the products introduced in this catalog for special systems or devices such as for atomic-energy control, aerospace use, medical use, passenger vehicle, and traffic control, are requested to consult the Fuji sales division.
- Customers are requested to prepare safety measures when they apply the products introduced in this catalog to such systems or facilities that will affect human lives or cause severe damage to property if the products become faulty.
- For safe operation, wiring should be conducted only by qualified engineers who have sufficient technical knowledge about electrical work or wiring.

[^0]:    Note: • Replace the $\square$ mark by the lamp voltage code. 110 V AC: $\mathrm{H}, 120 \mathrm{~V}$ AC: K, 220 V AC: M, 240 V AC: P

    - Lamp contacts are built-in, and switch operation and lamp circuit are interconnected. When current is
    applied to the lamp circuit, the lamp turns on as soon as the contacts are colsed.

[^1]:    Notes: • Up to 4-contact blocks are available.

    - NO contact is used for overlap contact.

[^2]:    Notes: - Voltages other than above are available.

[^3]:    F:Thermal fuse L: Indicator Z1, Z2: Component for surge protective device
