## Mini Contactors and Thermal Overload Relays SK Series, Types 06, 09, and 12

## The Smallest Class of Magnetic Contactors and Thermal Overload Relays in the World.

## Features

- International safety standards for standard models (IEC, GB, JIS, UL, and CSA).
- Models available with AC or DC operating coils (DC: 2.4 W and 1.2 W models only).
- Many optional units.

Auxiliary Contact Blocks (2-pole or 4-pole)
Coil Surge Suppression Units
Interlock Units

- Easier Thermal Overload Relay wiring.

The terminal arrangement separates main circuit wires and auxiliary circuit wires for easier wiring.

## Ordering Information (Types)

## Features

- International safety standards for standard models (IEC, GB, JIS, UL, and CSA).
- A terminal cover and dial cover are provided as standard features.
- Highly reliable 1NO1NC isolated auxiliary contacts to enable using NC and NO contacts at different potentials.
- Easily switch between manual and automatic reset.
- Parallel arrangement of main terminals and auxiliary terminals for easier wiring.

For automatic reset: 2 mm

Option

Types: *1 Not applicable to DC 1.2W Magnetic Contactors or Motor Starters (SK06 to SK12L) and SKH4L Auxiliary Relays *2 Use the SZ-ZMH Stand-alone Installation Unit together with the SZ-ZM2 Main Circuit Surge Suppression Unit.

## Miniature Control Relays with Special Sockets (2P, 3P and 4P) That Are Ideal for the China/Asian Market.

## Features

- The products have obtained the CCC certification and can satisfy the market demands.
- Standard products have been approved by UL, CSA and TÜV.
- The series products are equipped with an operating indicator (LED), ensuring a clear glance of work status.
- The products are environmentally friendly and conformed to regulations on pollution control of electronic information products.

## A Small 32AF Breaker Used in Branch Circuits Such as Those in Building and Control Panels.

## Features

Focusing on assembly of easy wiring, maintenance check, reasonable price, and standardized distribution box or boards design, BWO series MCCBs are designed mainly for civil building construction market and secondary distribution market.

- 400AF

Cassette type accessories
Allaccessories can be assembled by the user. Quickly adaptable to the many onsite changes in specifications.

Compliance to RoHS Directive
All materials used are compliant to RoHS Directive and the main components are easy to recycle.

Interchangeability
The design of the same external dimensions with G-TWIN circuit breaker.
Just simply change the model when a customer suddenly changes the design (e.g. when changed to earth leakage circuit breaker).

Line up

- 400AF

# This series of miniature circuit breaker is for the purpose of the protection of distribution equipment in the residential or similar facility, to protect against short circuit and overload damage. 

## - Features

- Among the characteristics of overload protection, there are the Curve C characteristic for the protection of lighting electrical systems having 5 to 10 In instantaneous tripping characteristic, and the Curve D characteristic for the protection of ordinary electrical system wires having 10 to 14 In instantaneous tripping characteristic.
- ELCB is completed by combining a miniature circuit breaker with an earth leakage shunt trip device.
- As functional components can be installed such as auxiliary switch, alarm switch among others, it can monitor and control the electrical system.

## ■ Miniature Circuit Breaker Standards

- Application
- Curve C: Illumination distribution system

Curve D: Industrial distribution system

- Overload and short circuit protection

## - Standards and Certificates

- IEC 60898-1, GB 10963.1
- CE, CCC
- Specifications
- Rated voltage: AC230/400V, $50 / 60 \mathrm{~Hz}$
- Rated current: curve C: 1 to 63A

$$
\text { curve D: } 1 \text { to 40A }
$$

- Mechanical life: 10000 times
- Tripping characteristic: curve C: 5 to 10 ln
curve D: 10 to 14In
- Breaking capacity

| Tripping <br> characteristic | Rated current <br> (A) | Rated operational <br> voltage (V) | Rated breaking <br> capacity (kA) |
| :--- | :--- | :--- | :--- |
| Curve C | 1 to 40 | $230 / 400$ | 6 |
|  | 50,63 | $230 / 400$ | 4.5 |
| Curve D | 1 to 40 | $230 / 400$ | 4.5 |

- Types

| Number of poles | Width $(\mathrm{mm})$ | Type |
| :--- | :--- | :--- |

## Miniature Circuit Breaker (1P+N)

## - Application

- TT/TN-S grounding system
- Phase and neutral protection against short circuit and overload
- Standards and Certificates
- IEC 60898-1, GB 10963.1
- CCC

## - Specifications

- Rated voltage: AC230V, $50 / 60 \mathrm{~Hz}$
- Mechanical life: 10000 times
- Tripping characteristic: C: 5 to 10In
- Breaking capacity: 4.5 kA
- Types

| Number of poles | Width $(\mathrm{mm})$ | Type |
| :--- | :--- | :--- |
| $1 \mathrm{P}+\mathrm{N}$ | 18 | BC32E1CN-1P |

## ■ Earth Leakage Circuit Breaker (1P+N)

## - Application

- TT/TN-S grounding system
- Phase and neutral protection against short circuit and overload
- Standards and Certificates
- IEC 61009-1, GB 16917.1
- CCC

## - Specifications

- Rated voltage: AC230V, 50 Hz
- Mechanical life: 10000 times
- Tripping characteristic: C: 5 to 10ln
- Rated residual operating current: 30 mA
- Breaking capacity: 4.5 kA
- Type

| Number of poles | Width $(\mathrm{mm})$ | Type |
| :--- | :--- | :--- |
| $1 \mathrm{P}+\mathrm{N}$ | 36 | BC32E1CLN-1P |

## Wiring Method

- Use of phase line and neutral line series products in the

## TT / TN-S systems

Phase line and neutral line are required to be switched in the TT (three-phase four-wire system)/TN-S (three-phase five-wire system) systems.

## Characteristic Curves

- BC32, BC50, BC63
- Curve C (5 to 10ln)

- Curve D (10 to 14In)

## New Models of 1600AF-6300AF Air Circuit Breakers That Comply with IEC Standards.

## Features

## - Breaking Capacity

Icu is equal to Ics up to 120 kA at maximum and Icw is up to 100 kA at maximum under 400VAC distribution.

## - Compact size

BT2 series, Air Circuit Breakers, have five framesize and four physical dimension sizes.

## - Installation

The bus bar terminal of the BT2 series, Air Circuit Breakers, can be simply installed as follows:

- Horizontal connection
- Vertical connection
- Composite connection

## - Safety performance

BT2 series, Air Circuit Breakers, are reliable by the following aspects:

- Reliable assurance of the three positions:

Connected
Test
Separated
by the locked and automatically unlocked mechanism at the draw-out socket.
Clear indication of ready-for-switching-on to ensure safe manipulation and reliable operation.
More reliable safety protection with seconday terminals of protection grade IP30

## - Protection and selection

BT2 Series, Air Circuit Breakers, can implement selective interlock of ZSI Region to ensure comprehensive selection of various protection and reduce the copper bar's bearing of thermodynamic.

- Intelligent controller (OCR)

Selecting OCR's, it can be classified into six types.

Type number nomenclature

# Transducers That Mount to a 16-slot Base Unit with Individual Power Switches. A Tester Can Be Used While the Transducer Is Mounted. 

## Features

- Recommended for customers that line up many Transducers for instrumentation.
- Power switches are built into the multislot Base Unit. There's no need for separate switch boxes.
- CE Marking for most Types.

## $\square$ Types and Ratings

| Type and name | Type | Input | Output 1 | Output 2 |
| :---: | :---: | :---: | :---: | :---: |
| Eight-slot Base Unit | WS2BA-08 | - | - | - |
| Sixteen-slot Base Unit | WS2BA-16 |  |  |  |
| DC-isolated Transducer (Isolator) | WS2DC | DC voltage or current | DC voltage or current | DC voltage or current |
| DC-isolated Transducer (High-speed Isolator) | WS2HS |  |  |  |
| DC-isolated Transducer (Super-high-speed Isolator) | wS2US |  |  |  |
| Isolated Distributor | WS2DY | 4 to $20 \mathrm{~mA} \mathrm{DC}(24 \mathrm{~V}$ DC) |  |  |

## Ideal for Measuring Three-phase Currents and Voltages for Distribution, Busbars, and Feeders.

## Features

- The same Type can be used for 3-phase 3-wire, singlephase, and single-phase 3 -wire systems.
Specifications in parentheses are the measurement specifications: Three-phase Ammeter (peak demand, demand, and instantaneous demand), Three-phase Voltmeter (voltage and frequency).
- Displays one bar graph and four digital measurements at the same time.
- Three analog output circuits and one alarm output circuit are available. Output element can be selected with a setting. (Optional)
- Resetting is possible from an external control input. (Optional) Also, a setting can be used to select the alarm output, the maximum/minimum value and alarm output, or the maximum/ minimum value.
- Use either an 85 to 264 V AC or 80 to 143 V DC power supply.
- Mounting dimensions are compatibly with previous
$110 \times 110 \mathrm{~mm}$ mechanical meters. Mounts to two holes on a diagonal line.

- Backlight provided as a standard feature. Set the backlight to light, not light, or go out automatically, and set the brightness (white light only). LED color: Green or white
- Types available for top-row and bottow-row mounting.
- All Types are RoHS compliant (EU Directive 2002/95/EC).

## - Types and Ratings

|  | Options |  | Analog outputs (3 circuits), 1 alarm output, and 1 external control input |  |  |  |  |
|  | Remarks |  | Phase switched between R, S, and T.*4 <br> Displayed separately from measurement ranges, and output range can be set. |  | Lines switched between RS, ST, and TR.*5 |  | Frequency is 0.0 Hz if input is less than $20 \%$ of measurement range. The output has a lower-limit limiter value (lower limit $-1 \%$ : percentage of output span). |

|  | Type |  | WE1SA Ammeter |  | WE1SV Voltmeter |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Measured element |  | Current | Demand current | Voltage | Frequency |
|  | Input |  | 0 to 5AAC |  | 0 to 150V AC [0 to 300V AC] *7 | $\begin{aligned} & 45 \text { to } 55 \mathrm{~Hz}, 55 \text { to } 65 \mathrm{~Hz}, \\ & 45 \text { to } 65 \mathrm{~Hz} \end{aligned}$ |
|  | Measurable ranges | Display | 120\% of meter fullscale *6 | 200\% of meter fullscale *6 | 101\% of meter fullscale | $\begin{aligned} & 44.9 \text { to } 55.1 \mathrm{~Hz}, 54.9 \text { to } 65.1 \mathrm{~Hz} \text {, } \\ & 44.8 \text { to } 65.2 \mathrm{~Hz} \end{aligned}$ |
|  |  | Analog outputs | 120\% of output span | 120\% of output span | 101\% of output span | $-1 \%$ or $101 \%$ of output span |

${ }^{* 1}$ The rated voltage for each phase and the $N$ phase is 100 V . However, if the fullscale input voltage is set to 150 V , RN and TN are 150 V and RT is 300 V on the bar graph. If the fullscale input voltage is set to $300 \mathrm{~V}, \mathrm{RN}, \mathrm{TN}$, and RT are 300 V on the bar graph.
*2 Due to the operating principle, the error will increase if the following inverter outputs are measured directly. Cyclic control, SCR phase angle control, or PWM control.
3 The analog outputs, alarm output, and external control output are optional.
4 Displays are as follows: Single-phase 3-wire (R-T-N): R-T-N, single-phase 3-wire (R-S-N): R-S-N, single-phase 3-wire (S-T-N): S-T-N, and single-phase: No phase display.
5 Displays are as follows: Single-phase 3-wire (R-T-N): RN-TN-RT, single-phase 3-wire (R-S-N): RN-SN-RS, single-phase 3-wire (S-T-N): SN-TN-ST, and single-phase: No wire pair display.
*6 If the number of display digits is exceeded, the maximum display value is 9,999 for a 4 -digit display and 999 for a 3 -digit display even if the value is within the measurement range.
*7 Values in brackets [ ] are for 300V

## Optional Specifications

| Type |  |  | WE1SA Ammeter | WE1SV Voltmeter |
| :---: | :---: | :---: | :---: | :---: |
| Analog outputs | Number of outputs |  | 3 circuits (negative common) |  |
|  | Output specifications |  | 4 to $20 \mathrm{~mA} \mathrm{DC} \mathrm{( } 550 \Omega$ max.) |  |
|  | Outputable elements |  | Current (each phase), demand current (each phase), or peak demand current (each phase) | Voltage (each phase and line) or frequency |
|  | Response time |  | 1 s max. (time required to reach $\pm 1 \%$ of final steady-state value) |  |
|  | Output ripple |  | Within two times the intrinsic error (percentage of output span) |  |
| Alarm output | Alarm element |  | Settable to demand current (OR of phases, individual phase, OR of phases except composite phases) or alarm OFF. | Settable to voltage (OR of lines (phases) or individual line (phase)) or alarm OFF. |
|  | Resetting method |  | Automatic reset or manual reset (setting) |  |
|  | Output contacts |  | No-voltage NO contacts |  |
|  | Contact capacity |  | 250V AC 5A or 125V DC 0.3 A for resistive load, 250V AC 2A or 125V DC 0.1 A for inductive load |  |
|  | Alarm element | Item | Specification |  |
|  | WE1SA: Demand current, WE1SV: Voltage | Function | Alarm display and alarm output for demand current $\geq$ Upper-limit setting | Alarm display and alarm output for measured value $\geq$ Upper-limit setting Alarm display and alarm output for measured value $\leq$ Lower-limit setting |
|  |  | Setting accuracy | $\pm 0.5 \%$ (percentage of fullscale) | $\pm 0.5 \%$ (percentage of fullscale) |
|  |  | Setting range | $5 \%$ to $100 \%$ of maximum scale value in $1 \%$ increments | $30 \%$ to $150 \%$ when fullscale is $150 \%$ in $1 \%$ increments |
| External control input | Function |  | One of the following three functions (changed with setting) can be controlled by applying an external voltage signal. |  |
|  |  | Alarm reset | The alarm output is reset (turned OFF). |  |
|  |  | Maximum/ minimum reset | The maximum and minimum values are reset to the current instantaneous value. |  |
|  |  | Complete reset | The above alarm reset and maximum/minimum reset are both performed. |  |
|  | Minimum operating pulse width |  | 300 ms , Continuous application is possible. |  |
|  | Input ratings |  | The input ratings are the same as the auxiliary power supply ratings. 100/110V AC 0.4VA, 200/220V AC 1.4VA, or 100/110V DC 0.4 W Accepts AC or DC. Contact capacity: Approx. 3mA at 100/110V AC/DC, approx. 6mA at 200/220V AC |  |

## Precaution on External Display Selection Input (Optional)

The external power consumption is 0.4 VA at $110 \mathrm{~V} \mathrm{AC}, 0.4 \mathrm{~W}$ at 110 V DC, and 1.4 VA at 220 V AC. If you use a relay or switch on the power supply, use one with a minimum applicable load of approx. 1 mA .

## Dimensions, mm

## Precautions for Correct Use

Mounting: The contrast of the LCD depends on the view angle. Adjust the installation location for the best angle.

## A One-circuit AC Energy Monitoring Unit at an Affordable Price. Even Easier Setup and Operation

## Features

- An in-panel F-MPC-series Energy Monitoring Unit for one circuit.
- Standard-feature RS-485 communications.
- The functionality of the F-MPC04S was refined to create a more affordable price.
- A compact, lightweight design that is $1 / 2$ the size and $1 / 3$ the weight of the F-MPC04S.
- Power consumption is also $30 \%$ less than the F-MPC04S.
- Easy setup with rotary and DIP switches.

- A separately sold Display enables in-panel display of measured data.

## Types and Ratings

| Product name |  | Type |
| :---: | :---: | :---: |
| One-circuit Energy Monitoring Unit |  | UM05-AR3 |
| Display and Setup Unit |  | UM05X-S |

## Specifications

- Basic Specifications

| Item |  | Specification |
| :---: | :---: | :---: |
| Ratings | Voltage | 100 to 240 V AC (allowable operating voltage range: 85 to 264 V AC) (Same input terminals are used for measurement and control power supply. Control power supply is input across the U and V terminals.) |
|  | Frequency | $50 / 60 \mathrm{~Hz}$ (allowable range :47.5 to 63Hz) |
|  | Current (CT primary/secondary) | $5 \mathrm{~A} / 7.34 \mathrm{~mA} \mathrm{AC}, 50 \mathrm{~A} / 73.4 \mathrm{~mA} \mathrm{AC}, 100 \mathrm{~A} / 33.3 \mathrm{~mA}$ AC, 200A/66.7mA AC, 400A/133.3mA AC, and 800A/133.3mA AC |
| Power supply | Load VA | 6VA |
|  | Inrush current | 30A, 3ms(240V) <br> 15A, 3ms(100V) |
| Insulation resistance |  | Between all electric circuits and ground (case/DIN rail): $\quad 10 \mathrm{M} \Omega$ min. <br> Between all I/O circuits and ground: <br> $10 \mathrm{M} \Omega \mathrm{min}$. <br> Between all electric circuits and all //O circuits: $5 \mathrm{M} \Omega$ min. |
| Vibration resistance |  | 10 to $58 \mathrm{~Hz}, 0.075 \mathrm{~mm}$ one-way amplitude, 58 to $150 \mathrm{~Hz}, 10 \mathrm{~m} / \mathrm{s}^{2}$ constant acceleration 10 cycles for 8 min each in $X, Y$, and $Z$ directions (with bracket to prevent shifting) |
| Shock resistance |  | $294 \mathrm{~m} / \mathrm{s}^{2}$ sine half wave for 11 ms 3 times each in $\mathrm{X}, \mathrm{Y}$, and Z directions (with bracket to prevent shifting) |
| Dielectric strength |  | Between all terminals and ground (case/DIN rail): $2,000 \mathrm{~V}$ AC for 1 min Between all electric circuits and all I/O circuits: $2,000 \mathrm{~V}$ AC for 1 min |
| Noise immunity Criteria B |  | Damped oscillating waveform at 1 to 1.5 MHz with peak voltage of 2.5 to 3 kV for 2 s |
|  |  | Square wave, 1.5 kV , 1ns/1 $/$ s continuously for 10 min |
|  |  | Radiated electromagnetic field: $20 \mathrm{~V} / \mathrm{m}$ *1 |
|  |  | Static electricity: Air discharge: 8 kV , Contact discharge (case): 4 kV |
|  |  | Burst noise: Control power supply: 2 kV , CT input (clamp): 2 kV , <br> I/O (clamp): 1kV |
| Overload capability | Current <br> circuits | 1.1 times maximum scale value (1.25 times rated current) for 2 hours |
|  | Voltage circuits | 1.1 times maximum scale value for 2 hours |
| Ambient operating temperature |  | -10 to $55^{\circ} \mathrm{C}$ |
| Storage temperature |  | -20 to $70^{\circ} \mathrm{C}$ |
| Relative humidity |  | 20\% to 90\% (with no condensation) |
| Atmosphere |  | No corrosive gas or excessive dust or dirt |
| Permissible momentary power interruption time |  | 20 ms (Communications and measurements are interrupted.) |
| Mass |  | Measurement Unit: Approx. 120 g (without CT) Display: Approx. 70 g (without connecting cable) |

[^2]- Measurement Specifications
(1) Current Value Display

| Item |  | Measurement range | Accuracy*1 |
| :---: | :---: | :---: | :---: |
| Voltages | 3-phase line voltages*2 (Vuv, Vvw, and Vwu) | 85 to 264 V | Vuv and Vvw : $\pm 1.0 \%$ FS Vwu : $\pm 2.5 \%$ FS |
| Currents | 3-phase current <br> (Ir, Is, and It)*2 | $0.4 \%$ to $125 \%$ of rating (50A CT: 0.4\% to $100 \%$, 100A CT: $0.4 \%$ to $120 \%$ ) | Ir and It : $\pm 1.0 \%$ FS Is : $\pm 2.5 \%$ FS |
| Active power*3 | Reverse power flow is negative. | Depends on current and voltage measurement ranges (current $\times$ voltage $\times$ $\sqrt{3}$ ) | $\pm 1.0 \%$ FS |
| Reactive power*3 | (Reactive power measurement method) | Same as above. | $\pm 1.5 \%$ FS |
| Active power consumption*3 | Forward active power consumption Reverse active power consumption | Display: 6 digits <br> F-MPC-Net communications: 4 digits <br> MODBUS communications: 9 digits | Equivalent to JIS normal class. <br> $20 \%$ at power factor o 1.0 and $5 \%$ to 120\% o frated durent <br> $25 \%$ a power facto o o 0.5 and $10 \%$ to $120 \%$ of araed arrent |
| Power factor | (Reactive power measurement method) | 0 to $\pm 1.000$ | $\pm 3.0 \%$ FS <br> ( $90^{\circ}$ phase angle conversion) |

Notes: • The accuracy does not include the error of an externally connected CT or VT.

- A 3-phase 3-wire, single-phase 3-wire, or single-phase 2-wire system is automatically
detected and measured. For a single-phase 2-wire system, Vvw, Vwu, Is, and It will be zero.
- The active power, reactive power, and active power consumption are measured for the following ranges: 85 to 264 V and $0.4 \%$ to $125 \%$ current.
(2) Period Measurement Values

| Item | Display | Communications | Accuracy | Remarks |  |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Voltages <br> Maximum period voltages <br> (Vuv and Vvw) <br> Average period voltages <br> (Vuv and Vvw) <br> Minimum period voltages <br> (Vuv and Vvw) | $\times$ |  | $\pm 2.5 \%$ FS | The maximum and minimum <br> values are the actual values <br> for one cycle of a commercial <br> frequency. During the period (1 <br> min), the previous maximum, <br> average, and minimum values <br> are retained. |  |
| Curents | Maximum period currents <br> (Ir and It) <br> (VT error is not <br> included.) <br> Average period currents <br> (Ir and It) <br> Minimum period currents <br> (Ir and It) | $\times$ |  | $\pm 2.5 \%$ FS <br> (CT error is not <br> included.) |  |

Note : The values for each minute are sent in communications responses. (They do not appear on the display.)

- Communications Specifications

Either the F-MPC-Net or MODBUS/RTU protocol is selected for RS-485 communications.

| Item | Specification |  |
| :---: | :---: | :---: |
|  | F-MPC-Net | MODBUS/RTU |
| Standard | EIA-485 |  |
| Transmission method | Half-duplex, 2-wire |  |
| Data transfer method | 1:N (Energy Monitoring Unit), polling/selective |  |
| Synchronization method | Start-stop |  |
| Transmission distance | 1,000m (total distance) |  |
| No. of connected nodes | 64 max.*1 per network (The master is counted as a node.) |  |
| Baud rate | 4,800, 9,600, 19,200, or 38,400 bps (selectable) |  |
| Address setting | 1 to 99*2 (MODBUS/RTU protocol: 1 to 99) |  |
| Connection method | Terminal block |  |
| RS-485 terminal names | DXA and DXB | Use DXA for the D1(+) connection and DXB for the $\mathrm{DO}(-)$ connection. |
| Transmitted characters | ASCII | Binary |
| O Start bits | 1 (fixed) | 1 (fixed) |
| $\stackrel{\sim}{*}$ Data length | 7 or 8 bits (selectable) | 8 bits (fixed) |
| $\begin{aligned} & \text { 을 Parity bit } \\ & \text { בِ } \end{aligned}$ | None, even, or odd (selectable) | None, even, or odd (selectable) |
| Stop bits | 1 (fixed) | No parity: 2 bits (fixed) Other: 1 bit (fixed) |
| BCC | Even horizontal parity | CRC-16 |

Default settings: F-MPC-Net protocol, 19,200bps baud rate, 7-bit data length, and odd priority.(A UM05X-S Display and Setup Unit is required to change the default communications settings.)
*1 If 32 device nodes are connected, each device node is counted as two nodes, reducing the maximum number of connected nodes.
*2 Communications addresses are set on rotary switches. Even for MODBUS/RTU, set the address on the Energy Monitoring Unit to between 1 and 99. Communications are disabled if the communications address is set to 00 .

Dimensions, mm

#  Include a F-MPC Web Unit to easily build a monitoring system. 

## Features

- The energy monitoring system uses the F-MPC-Net communications protocol to monitor ON/OFF status, measure pulse signals, output alarm relays, and read flow meters.
- Use the DI/DO Unit to input ON/OFF signals, count total pulses, and control the ON/OFF status of relay outputs.
- Use RS-485 2-wire communications to send input status to a host, control relay outputs with ON/OFF commands from the host, and more.

Type and Ratings

| Product name | Specification | Type |
| :--- | :--- | :--- | :--- |
| DI/DO Unit | 6 inputs (contact or transistor inputs) and 4 relay outputs (250V AC 1A) | UM11-D0604 |

## Specifications

- Basic Specifications

- I/O Specifications
(1) DI (Digital Input)

There are 6 digital inputs, and they can be used to read ON/OFF status and count pulses. With 2 of the 6 digital inputs, pulse widths of 10 ms or longer can be counted. With the other 4 digital inputs, pulse widths of 50 ms or longer can be counted. ON/ OFF status can also be sent via communications. The total count values for pulses can also be sent via communications.

| Item | Specification | Remarks |
| :--- | :--- | :--- |
| Digital input type | Contact or transistor inputs | The service power supply voltage is always applied. |
| Minimum input signal width | in1 and in2: 10 ms, in3 to in6: 50 ms | For a pulse input, the ON period and OFF period must be the same or longer <br> than the minimum input signal width. |
| Operating time measurement | Time error: $\pm 1.0 \%$ (minimum value: $\pm 1 \mathrm{~s}$ ) | The total ON time is calculated in seconds. |
| ON current | ON for 4 mA or higher | While an input is ON, a current of approx. 5mA will flow. |
| OFF current | OFF for lower than 1 mA |  |
| Internal Circuits | Input circuit for 1 input | There are two terminals each for the in1 and in2 inputs. <br> The in3 and in4 inputs share a common, and the in5 and in6 inputs share a <br> common. <br> The ground terminal is internally connected to the common terminals. |

- Circuit Configuration Diagram

(2) DO (Digital Output)

There are 4 digital outputs and their ON/OFF status can be controlled via communications.

| Item | Specification | Remarks |
| :--- | :--- | :--- |
| Digital output type | Relay outputs (NO contacts) | Equivalent to RB105 card relays. |
| Continuous carry current | 250 V AC 1A (continuous carry current) |  |

## - Communications Specifications

| Item |  | Specification |  |
| :---: | :---: | :---: | :---: |
|  |  | F-MPC-Net | MODBUS/RTU |
| Standard |  | EIA-485 |  |
| Transmission method |  | Half-duplex, 2-wire |  |
| Data transfer method |  | 1:N (I/O Unit), polling/selective |  |
| Transmission distance |  | 1,000m (total distance) |  |
| No. of connected nodes |  | 64 max. per network (The host is counted as a node.) (See note 1.) |  |
| Baud rate |  | 4,800, 9,600, 19,200, or 38,400 bps (selectable) |  |
| Address setting |  | 1 to 99 (See note 2.) |  |
| RS-485 terminal names |  | DXA and DXB | Use DXA for the D1(+) connection and DXB for the D0(-) connection. |
| Transmitted characters |  | ASCII | Binary |
| Data format | Start bits | 1 (fixed) | 1 (fixed) |
|  | Data length | 7 or 8 bits (selectable) | 8 bits (fixed) |
|  | Parity bit | None, even, or odd (selectable) | None, even, or odd (selectable) |
|  | Stop bits | 1 bit (fixed) | No parity: 2 bits (fixed), Other: 1 bit (fixed) |
|  | BCC | Even horizontal parity | CRC-16 |

(See note 1.) If 32 device nodes are connected, the maximum number of connected nodes may be reduced.
(See note 2.) Communications addresses are set on rotary switches. Even for MODBUS/RTU, set the address on the I/O Unit to between 1 and 99 . Communications are disabled if the communications address is set to 00 .

- Dimensions

System Configuration

## Lineup Includes New 100A and 800A CTs for the F-MPC.

## Features

Together with previous 5A, 50A, 200A, and 400A CTs, the six Types make it even easier to handle system needs.
Special specifications just for the Fuji F-MPC-series Energy Monitoring Units.

- Clamp construction for easy installation.
- Large K to L indications to easily identify the primary conductor direction.
- Built-in clamping diode. The CT will not burn out even if the secondary circuit is open.

$\square$ Types, Ratings, and Specifications

| Series | Type | Rated primary current [A] | Rated secondary current $[A]$ | Hole diameter | Rated <br> frequency [Hz] | Overcurrent resistance | Rated load | Dielectric strength | Connection | Mass <br> [g] |

Dimensions, mm

- CC2D71

- CC2D52

# The APR-D Series is the successor to the APR-aB and APR-cC. A CPU has been mounted to greatly improve the functionality and performance of these space-saving, wire-reduction, Iow-cost AC Power Regulators. 

## Features

- Continuous comb-teeth pulse control enables application with inductive loads, transformer primary control, and rectifier primary control.
Optimum adjustment of LED illumination (phase control) is also possible.
Note: The load current must be at least the minimum load current at the rated voltage.
- The waveform control method can be changed between phase control, cyclic control, and phase angle proportional control.

Phase Control (0\% to 100\%)

Cyclic Control (Intermittent Control)

- The standard specifications are for no command input connector. (Reduces wiring and lowers the cost.) For only automatic or manual settings, the function that is set for the command input terminal block can be changed to cover for the absence of the command input connector.
- Smallest in the class: Space can be saved by tight placement (minimum spacing interval for width: 2 mm ).
- Digital settings and monitor functions are provided as standard features, including a base load setting and slope setting.

## $\square$ Types and Ratings

| Phases | Input voltage | Output current [A] | Type |
| :---: | :---: | :---: | :---: |
| Singlephase | 100 to 240 V common use | 20 | RPDE2020-T |
|  |  |  | RPDE2020-A |
|  |  | 45 | RPDE2045-T |
|  |  |  | RPDE2045-A |
|  |  | 60 | RPDE2060-T |
|  |  |  | RPDE2060-A |
|  |  | 100 | RPDE2100-T |
|  |  |  | RPDE2100-A |

[^3]Types with control method $B$ are available at the same price as Types with control method $A$.

- The soft start, soft up, and soft down times can be individually set to 0 to $\mathbf{1 0 0 . 0} \mathbf{~ s}$.
- Power supply is automatically detected from 100 to 240 V AC, $50 / 60 \mathrm{~Hz}$.
- Control methods include current-limiting control and fixed-current feedback control.
Heater burnouts can also be detected (load open state detected for cyclic control).
Note: Burnout detection is possible for one to three elements for heaters that use alloys or other elements for which temperature-dependent changes in resistance are limited.
- Serial communications is available as an option. Main Unit Option Type:
ZAP: Parallel operation of up to 50 Regulators is possible. A flicker prevention function can be used for cyclic control.
ZAM: You can make settings and monitor values with RS485 (Modbus RTU) communications.
- All Types have the CE Marking.

## Specifications

|  |  | Setting device | Digital setting |  |  |  |
|  | Soft start time Soft up time Start down time | Setting range | Types with T or A control method: 0 to 100 s Types with B control method: 0.5 to 100 s (See note 2.) |  |  |  |
|  |  | Setting device | Digital setting. Each time is set individually. |  |  |  |
|  | Feedback control method (phase control only) |  | AC CLR (Types with A control method) <br> AC ACR + AC CLR (Types with A control method) (AC CLR is given priority in operation.) |  |  |  |
|  | Manual or automatic selection signal |  | No-voltage contacts |  |  |  |
|  | Parallel operation master/slaves |  | Maximum number of nodes: 50, main unit option Type: ZAP (Not compatible with APR-N Series.) |  |  |  |
|  | Network communications |  | RS-485-compliant, 2-wire, half-duplex communications, start-stop synchronization, Modbus protocol; RTU-complaint communications, maximum number of nodes: 31, main unit option Type: ZAM |  |  |  |
|  | CPU memory error |  | CPU memory errors are detected at startup. |  |  |  |
|  | Power supply errors |  | An error is detected if the control power supply is not between 45 and 65 Hz . |  |  |  |
|  | No connection to automatic setting input |  | No connection to a current signal ( 4 to 20 mA DC ) or voltage signal ( 1 to 5 V DC ) is detected if automatic setting is specified. |  |  |  |
|  | No connection to manual setting input |  | No connection to a manual setting device (external variable resistor) is detected if manual setting is specified. |  |  |  |
|  | No connection to slope setting input |  | No connection to a slope setting device (external variable resistor or 1 to 5 V DC ) is detected. |  |  |  |
|  | Reversed phase detection |  | Negative-phase sequences are detected for the main circuit power supply and control power supply (main unit option Type Z45 only). |  |  |  |
|  | Data writing/setting errors |  | Read/write errors are detected for EEPROM. |  |  |  |
|  | Thyristor errors |  | Thyristor short-circuits are detected with an internal CT (Types with A or B control method). |  |  |  |
|  | Communications errors |  | Data transmission error are detected for parallel operation or network communications (main unit option Type ZAP or ZAM) |  |  |  |
|  | Current limit detection |  | Load currents that exceed the CLR set value are detected. The phase angle is switched to reduce the load current to within the CLR set value (Types with A or B control method). |  |  |  |
|  | Heater burnout |  | A burnout is detected if the APR output current goes below the burnout detection value (Types with A or B control method). (See note 3.) |  |  |  |
|  | Alarm output |  | Open collector, 24V DC/0.1A, 1 circuit |  |  |  |
|  | Ambient temperature |  | -10 to $55^{\circ} \mathrm{C}$ (Derate the load current against the rated current above $40^{\circ} \mathrm{C}$ and below $55^{\circ} \mathrm{C}$.) |  |  |  |
|  | Storage temperature |  | -20 to $60^{\circ} \mathrm{C}$ |  |  |  |
|  | Ambient humidity |  | $5 \%$ to 95\% RH (with no condensation) |  |  |  |
|  | Others |  | No corrosive gas (especially sulfidizing gas or ammonia gas), dust, or vibration. Indoors, altitude: 1,000 m max. |  |  |  |
|  | Dielectric strength (between main circuit and ground) |  | 2,000V AC 1 min |  |  |  |
|  | Insulation resistance (against ground) |  | $10 \mathrm{M} \Omega$ with 500 V DC insulation resistance tester |  |  |  |

Notes: 1) "Performance maintained" means that the specifications are met and operation is possible. "Operation maintained" means that components are not damaged and operation is possible.
2) The soft start, soft up, and soft down times for Types with a B control method will be invalid if they are shorter than the response speed of PI control

This is because PI control is given priority over the soft start, soft up, and soft down times.
3) For cyclic control, an open load is detected.
4) Just one of the Communications Board can be installed at the factory.

## Dimensions

- Refer to catalog number HS170.

# Three-phase Rail-mounting Power Filters RNFTD and RNFDS Series 

## Three-phase, Rail-mounting Power Filters for Output Circuits.

## Features

- Mount either with 35 mm width IEC rail or M4 screws. (No accessories are required.)
- Protection against loosing terminal screws, finger protection, and terminal cover-free structure.
- Volume reduced to $61 \%$ and weight reduced to $71 \%$ of previous Fuji Electric Types.
- Greatly improve damping performance by combining RNFTDseries Input Circuit Power Filters with RNFDS-series Output Circuit Power Filters.

Types

- RNFTD-series Input Circuit Power Filters

| Type | Phases | Rated <br> voltage [V] | Rated <br> current [A] | Dielectric strength [V] <br> (between line and ground) | Leakage current <br> $[\mathrm{mA}]$ | Voltage drop <br> [V] | $\left.\begin{array}{l}\text { Ambient operating } \\ \text { temperature }\end{array}{ }^{\circ} \mathrm{C}\right]$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

- RNFDS-series Output Circuit Power Filters

| Type | Phases | Rated voltage [V] | Rated current [A] | Dielectric strength [V] (between line and ground) | Voltage drop [V] | Ambient operating temperature $\left[{ }^{\circ} \mathrm{C}\right.$ ] |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| RNFDS05-20 | Three-phase | 250 | 5 | 2,000V AC 1 min | 1.0 max. | -10 to 50 |
| RNFDS10-20 |  |  | 10 |  |  |  |
| RNFDS20-20 |  |  | 20 |  |  |  |
| RNFDS30-20 |  |  | 30 |  |  |  |
| RNFDS10-40 |  | 480 | 10 | 2,500V AC 1 min |  |  |
| RNFDS20-40 |  |  | 20 |  |  |  |
| RNFDS25-40 |  |  | 25 |  |  |  |
| RNFDS30-40 |  |  | 30 |  |  |  |

## Ideal for Temperature Control in Distribution Boards and Control Cabinets.

- Turn space heaters ON and OFF to control in-panel temperatures. (NC contacts)
- Turn ventilation fans ON and OFF to control in-panel temperatures. ( $\mathrm{NO} \mathrm{contacts)}$

## Features

- Types available with either fixed temperatures or variable temperatures.
- Easy mounting to DIN rails.
- Save energy and reduce $\mathrm{CO}_{2}$ emissions by controlling temperatures.
- A thermostat is used, so no power supply is required.
- All Types are RoHS compliant (lead-free).
$\square$ Type number nomenclature

Specifications

| Type | PQ1 | PQ2 |
| :--- | :--- | :--- |
| Maximum ratings | 100 to 240V AC 3A (resistive load) <br> 5 to 24V DC 1A (resistive load) |  |
| Temperature error | Operating temperature: $\pm 4 \mathrm{~K}$ *4 |  |
|  | Reset temperature: $\pm 4 \mathrm{~K}$ | - |
| Differential *1 | 7 k *2 | 4 to $7 \mathrm{~K} * 3$ |
| ON resistance | $1 \Omega$ max. (initial value) |  |
| Durability | 100,000 operations |  |
| Ambient operating <br> temperature | -5 to $70^{\circ} \mathrm{C}$ |  |
| Ambient operating <br> humidity | $90 \%$ RH max.(with no condensation) |  |
| Mass | 50 g | 70 g |

Notes: ${ }^{* 1}$ ) The difference between ON and OFF.
${ }^{*} 2$ ) For an operating temperature of $40^{\circ} \mathrm{C}$, the operating temperature is $40^{\circ} \mathrm{C} \pm 4 \mathrm{~K}$ and the reset temperature is $33^{\circ} \mathrm{C} \pm 4 \mathrm{~K}$ ( 3 K min.)
${ }^{*}$ *) For an operating temperature of $60^{\circ} \mathrm{C}$ (it is a rough standard for other temperatures).
*4) For the PQ2, this is the accuracy at $60^{\circ} \mathrm{C}$ (it is a rough standard for other temperatures).

Dimensions, mm

- PQ1

Connection Diagram (Terminals 1, 2, 7, and 8)

Note) The locations of the load and power supply are examples. (They could be reversed.)

## Precautions

- Use the unit at an installation temperature of between -5 and $70^{\circ} \mathrm{C}$ and at a humidity of $90 \%$ max.
- Store the unit at a storage temperature of between -10 and $70^{\circ} \mathrm{C}$ and at a humidity of $60 \%$ max.
- Use the unit in a location that is not subject to dust, dirt, chemicals that adversely affect electric components, or harmful gases.
- Do not subject the unit to vibration or shock.
- PQ2

## Mounting and Removing

## Mounting the Unit

A. Hook the top of the unit onto the rail.
B. Press in on the bottom of the unit.

## Removing the Unit

A. Pull down on the slider with a flat-blade screwdriver.
B. Pull out on the unit to free the bottom.
C. Remove the top of the unit from the rail.

Note) If the unit may move on the rail after it is mounted, we recommend that you use end clamps.

## A New OCR with Enhanced Functionality.

## Features

- Stable protection with digital operation.
- Easier coordinated protection with four time-lag characteristics.
- Three-step instantaneous characteristic for easier coordinated operation with upstream and downstream protective devices.
- Constant monitoring of internal circuits and automatic inspection of output circuits.
- Numeric confirmation of operating status.
- Mounting is compatible with previous QH Series.

Four Time-lag and Three Instantaneous Characteristics

Digital Overcurrent Relay QHA-OC1

Instantaneous characteristics
Setting can be changed from 2 steps to 3 steps.

Four time-lag characteristics
Extremely inverse time lag (EI)
$\square$ Very inverse time lag (VI)
$\square$ Inverse time lag (NI)
$\square$ Definite time lag (DT)

# Moded Cased Circuit Breakers and Earth Leakage Circuit Breakers Marketing of G-TWIN-series IP-reinforced Terminal Covers 

## Features

- G-TWIN-series 125-250AF Short Terminal Covers
- Mount the covers to increase the range of insulation
protection on the front.
* The protection ranges for the wire insertion section and from the back are the same as before.

## Types

BW9BTCA - S 3 W P20 IP-reinforced Type designation
Color (W = Grey, Blank = Transparent)
Number of poles (2 to 4)
Length ( $\mathrm{S}=$ short)
Basic Type number

## Modified Products

## Changed Types

## Applicable Types and Specific Changes

Ask your Fuji Electric sales representative for more detailed information.

| Product | Series and Type | Changed part | Specific change | Change date |
| :---: | :---: | :---: | :---: | :---: |
| Magnetic Contactors or Magnetic Motor Starters | SC-03 to SC-N14, FC Series | Label | Changed CCC energy-saving label. | August 2011 |
|  | SC, SW-03 to SW-5-1 | Main terminals | Raised main terminal base level. | February 2012 |
|  | SC and SW-N4 to SW-N7 | Fixed contact block | Added notch to fixed contact block. | February 2012 |
|  | SC-N16 | Some of the configuration parts | Shapes | November 2011 |
|  | NEO SC Series | Terminal cover screws | Color | July 2011 |
|  | New SC-series Mechanicallatching Types | Operating indicator | Color | July 2011 |
|  | New SC-series Generalpurpose Special Types | Nameplate | Changed nameplate. | July 2011 |
|  | Some NEO SC-series and SB-series Types | Fixed contact block | Changed to non-plated contact block. | September 2011 |
|  | Some Types of New SCseries Thermal Overload Relays | Nameplate | Changed nameplate. | April 2012 |
|  |  | Reset releases | Added mounting bracket (accompanying SK marketing). | February 2012 |
|  | FC-OS | Contact support | Changed color. | February 2012 |
|  | FC and SJ Series | CCC Mark | Changed to printing the CCC Mark. | September 2011 |
|  | SJ-0G and SJ-06G (including SW) | Main contacts | Changed shape. | April 2011 |
|  | Some Types of Surge Absorber Units | Indications | Added manufacturing location. | January 2012 |
| Manual Motor Starters | BM3 Series | Power supply input terminal block | Power supply input terminals | January 2012 |
|  | Optional Products for BM3 Series | Packaging labels and nameplates | Contents | June 2011 |
|  | BM3R and BM3V | Nameplate | Contents | October 2011 |
|  | BM3 Series | UL nameplate | Contents | February 2012 |
| Automatic Breakers and Earth Leakage Circuit Breakers | G-TWIN 400AF | Auxiliary nameplate | Changed dimensions. | April 2011 |
|  | Power Controller for G-TWIN 400-800AF | Wiring outlet | Wiring outlet position | September 2011 |
|  | G-TWIN-series and L-series Rain-proof Steel Boxes for 100AF and Smaller Types | Packaging | Packaging specifications | September 2011 |
|  | G-TWIN Economic Types of 100AF or Smaller | Studs for rear mounting (X Types) and flushmounting (E Types) Types | Stud shape | February 2011 |
|  | G-TWIN 630AF and 800AF | Terminal cover | Shape | May 2011 |
|  | G-TWIN Global Types, 50AF and 100AF | Precautions nameplate | Contents | February 2012 |
|  | Q2 Handle Key Lock Device, Plate Type for G-TWIN 400AF to 800AF | Set screws | Shape | December 2011 |
|  | Solid-state Circuit Breakers | Accessory lead wire | Color | July 2011 |
|  | 50AF and 100AF Earth Leakage Automatic Breaker | Earth Leakage indications | Changed parts. | April 2012 |
|  | V-Type External Operation Handle Extension Shaft | Set screws | Set screw length | April 2011 |
|  | N - and V-Type External Control Handle | Structure | Changed structure. | June 2011 |
|  | G-TWIN Global Types | Nameplate and operating instructions | Nameplate printing method and operating instruction languages | December 2011 |
|  | Build-in Earth Leakage Circuit Breakers | Nameplate | Changed nameplate (changed PSE mark). | March 2011 |
|  | Electric Work Automatic Breaker | Nameplate | Changed nameplate (changed PSE mark). | March 2011 |
|  | G-TWIN 100AF and Smaller Types for Transformer Primary | Nameplate | Contents | July 2011 |
| Earth Leakage Protective Relays | EL Types | Main unit case | Changed material of main unit case. | February 2012 |
| Circuit Protectors | CP-E Types | Ratings nameplate | Changed design. | May 2012 |
|  | CP-F, CP-E, CP-V, CP-P, and CP-B Types |  | Contents | June 2011 |

| Product | Series and Type | Changed part | Specific change | Change date |
| :---: | :---: | :---: | :---: | :---: |
| Low-voltage Fuses | Fuse Holders for Indicator Fuses | Printing of lot number | Ink color | January 2012 |
|  | Plug Fuses | Protective cover for charging section | Height and logo mark | May 2011 |
|  | CR Fuses | Indications | Rated current and lot indication method | August 2011 |
| Command Switches | AH08-125 Series | LED lamp | Shape and color | September 2011 |
|  | AR22, DR22, AR30, DR30, AM22, DM22, AG28, and DG28 Series | Transformer Unit | Company logo and part shape | March 2012 |
|  | AH25 series | LED globe (green) | Appearance | June 2011 |
|  | $\begin{aligned} & \text { AG22, AG23, AG225, AH164, } \\ & \text { AH165, AH165-2, AH16P, } \\ & \text { AH16P-2, AH22P, and AH225 } \\ & \text { Series } \end{aligned}$ | Contact Unit | Changed. | April 2012 |
|  | Selector Switches (Some Types) | Stopper | Changed color. | February 2012 |
|  | Command Switches and Square Indicators | LED lamp | Changed Y color specification. | April 2011 |
| Multi Display Lights | AP30F and AP40F | LED (pure white) | Brightness and color | April 2012 |
|  | AP30F and AF41F | Special Unit | Deleted flicker and Constant-voltage Unit specifications. | July 2011 |
| Control Relays | Types with 24V DC Rating | Coil | Changed color of coil insulation tape. | February 2011 |
|  | HH2 $\square$ Types (Some Types) | Surge-absorbing diode | Changed mounting structure. | April 2012 |
|  | HH64-series Power Relays | Stamp | Added contents to ratings stamp. | November 2011 |
| Timers | MS4S (Some Types) | Output contacts | Changed electrical durability. | January 2012 |
|  | Sockets for MS4S | Terminal section | Appearance | May 2012 |
|  | ST7P Series | Socket packaging box | Changed displayed contents (removed UL contents). | April 2012 |
| Terminal Blocks | AU-TW39 | Main unit | Changed color of acceptance stamp. | November 2011 |
|  | LT5 | Cap | Changed text printing method. | March 2012 |
| FA Sensors | PE-U Flat Inductive Proximity Switches | Case | Displayed contents | February 2012 |
|  | Some Types of K244-series Limit Switches | Case | Changed internal shape of case. | February 2012 |
| Cam Switches | AK22 | Main unit | Changed logo mark. | June 2011 |
|  | AK22-J | Key | Deleted logo mark from special key. | June 2011 |
|  | AK22 | Symbol plate | Eliminated symbol plate standard accessory. | July 2011 |
|  | AK22 | Packaging specifications | Deleted "No NP" from the packaging box accompanying elimination of signal plate standard accessory. | October 2011 |
|  | RC310-1,2 | Packaging specifications | Deleted masking table (with small 10-position handle and microswitch) | November 2011 |
| Energy Monitoring Equipment | $\begin{aligned} & \text { F-MPC60B and F-MPC50 } \\ & \text { Series } \end{aligned}$ | Indicator LEDs | Changed parts. | March 2012 |
|  | F-MPC Web Units | Software and appearance | Version upgrade and RoHS compatibility | May 2011 |
| High-voltage Equipment | Some Types of High-voltage Current-limiting Fuses | Packaging | Changed packaging method. | April 2012 |
|  | Some Types of High-voltage Current-limiting Fuses | Main nameplate | Changed lot and acceptance stamp indication. | May 2012 |
|  | Remote Power Controllers for High-voltage Disconnecting Switches | Electric motor | Exterior color | December 2011 |
|  | HS Types | Parts in main circuit connector | Changed surface treatment. | April 2011 |
| Square Current Transformers with Through Hole | CC3M $\square$ | Coating, nameplate, etc. | Eliminated red coating and changed nameplate specifications and installation instructions. | January 2012 |

## Discontinued Products

## Discontinued Products

Ask your Fuji Electric sales representative for more detailed information.

| Product name and series | Discontinued product | Replacement Types | Date of discontinuation | Remarks |
| :---: | :---: | :---: | :---: | :---: |
| Magnetic Contactors or Magnetic Motor Starters | SJ-series Magnetic Contactors and Switches | SK Series | September 2012 |  |
|  | SC-M-series Magnetic Contactors and Optional Products | SK Series | September 2012 |  |
|  | SZ-J $\square$ Operation Counters | - | July 2012 |  |
|  | Some Types of SRC-series Magnetic Contactors and Switches | SK Series | September 2012 |  |
| Auxiliary Relays | SRC(WRC)50-2F/X Contactor-type Auxiliary Relays | SRC(WRC) 50-2U/X | March 2012 |  |
| Solid-state Contactors | Reversible Unit-type SSCs | None | September 2011 |  |
|  | SY-P-A1 Power Units for SSCs | None | September 2011 |  |
| Molded Cased Circuit Breakers and Earth Leakage Circuit Breakers | 1200AF-Type BU Breakers with UL and CSA Standard Certification | - | April 2011 |  |
|  | BU Breakers | - | March 2012 |  |
|  | DG33N-2E | Equivalent product from another company | March 2012 |  |
| Command Switches | Command Switch DR30B0 30-dia. Electromagnetic Buzzers | DR30B5 and DR30B6 Types (electronic sound) | December 2012 |  |
|  | AG22- and AG23-series Square Command Switch Barriers (White) | Black and gray Types in the same series | April 2012 |  |
|  | Constant-voltage Units | None | August 2012 |  |
| Control Relays | H35-7.5 Steel Socket Mounting Rails | TH35-7.5AL (Aluminum Rail) | July 2012 |  |
| Timers | MS4SM-DB, MS4SA-DB, MS4SR-CE, and MS4SR-CEN | - | November 2011 |  |
| Terminal Blocks | AYBN and AYBS TÜV Types |  | November 2011 |  |
| Proximity Switches | PE2-CTS Spatter-resistant Types | - | May 2012 |  |
| Limit Switches | Al Series (Metal Types) | - | March 2011 |  |
| AS-i | AS-i (Slave) AS-i Safety Accessory Gateway | - | September 2012 |  |
| Transducers | Some L, C, S, WH1, WH7, and WH9-series Types |  | January 2012 |  |
| Energy Monitoring Equipment | Some F-MPC60B-series Types (UM40*) |  | March 2011 |  |
| AC Power Regulators | RPBE and RPCE |  | March 2012 |  |
| Control Power Transformers | Some CU4 Types |  | December 2011 |  |
|  | CU5 |  | December 2011 |  |

## \. Safety Considerations

- Operate (keep) in the environment specified in the operating instructions and manual. High temperature, high humidity, condensation, dust corrosive gases, oil, organic solvents, excessive vibration or shock might cause electric shock, fire, erratic operation or failure.
- For safe operation, before using the product read the instruction manual or user manual that comes with the product carefully or consult the Fuji sales representative from which you purchased the product.
- Products introduced in this catalog have not been designed or manufactured for such applications in a system or equipment that will affect human bodies or lives.
- Customers, who want to use the products introduced in this catalog for special systems or devices such as for atomic-energy control, aerospace use, medical use, passenger vehicle, and traffic control, are requested to consult with Fuji Electric FA.
- Customers are requested to prepare safety measures when they apply the products introduced in this catalog to such systems or facilities that will affect human lives or cause severe damage to property if the products become faulty.
- For safe operation, wiring should be conducted only by qualified engineers who have sufficient technical knowledge about electrical work or wiring.
- Follow the regulations of industrial wastes when the product is to be discarded.
- For further questions, please contact your Fuji sales representative or Fuji Electric FA.
