Optimum Proposal fully matching Local Situation

When planning an overseas factory with the same functions or facilities as the existing plant, you may make basic plan/design domestically. However you will have to work in the local country for finalizing concrete and specific interfaces, arrangements with local authorities considering local conditions, regulations and utilities in the country.

Covering the said purposes, we have been establishing our overseas companies in South East Asia, especially in Indochina peninsula as shown in the map below and will expand our business focusing further globalization and economic growth.

We will contribute to customers on "One stop solution", starting from domestic meetings up to local taking over basis, as general facilities engineering and construction company with our overseas subsidiaries.

Fuji Electric Engineering & Construction Co. Ltd.
