Fuji Electric Co., Ltd.

Fuji Electric Exsaust Gas Cleaning System (EGCS)
Replacement of parts during Intermediate Survey

We would like to express our deepest appreciation to you for your continued support for our ship exhaust gas cleaning systems (EGCS).

In order to operate the EGCS stably and maintain its performance over the long term, in addition to continuing daily and annual inspections, we strongly recommend continuing daily and yearly inspections as well as replacing EGCS components during the intermediate survey too.

Of these, it is necessary to replace the electronic parts that make up the measuring equipment.

[Replacement parts]

- Exhaust gas analyzer: LCD of the control unit
- Water quality meter: Turbidity sensor optics
PAH+ sensor optical components, etc.

※For EGCS part replacement during Intermediate Survey, please contact to our sales dept and plan to carry out the above replacement work.

[To customers who have not carried out annual inspections]

If your good company yet not carried out this annual inspection work, please make sure and have a necessary action as soonest possible.

※ For details of the annual inspection, please contact us immediately.

Yours sincerely
