The IGBT module is a key device for achieving energy savings and stable power supply in industrial equipment such as motor drive inverters, uninterruptible power supplies (UPS), and power conditioners for wind and photovoltaic power generation equipment. In recent years, there has been a strong demand for energy savings, miniaturization, space savings, and increased reliability in industrial equipment and devices. In order to meet this demand, we developed the 7th Generation "X Series" IGBT Module.

- Contributes to energy savings by reducing power loss, while also reducing inverter loss by 10% and chip temperature by 11°C (Comparison with the 6th Generation V Series EP3 Package (75 A), at \( f_c = 8 \text{ kHz} \))
- Achieves equipment miniaturization
  Footprint size can be reduced by 36% by replacing the previous 6th Generation V Series EP3 (75 A) with the new 7th Generation X Series EP2 (75 A) (See \(^*1\))
- Contributes to improved equipment reliability
  Achieves guaranteed continuous operation at \( T_{\text{vi(op)}} = 175°C \)

\(^*1\) Application example
1. Low loss

The module has been optimized by thinning the thickness and miniaturizing the structure of the IGBT chip and diode chip that makes up the module. This reduces power losses during inverter operation compared with previous products (our 6th generation V series).

Reduces inverter loss by 10% and chip temperature by 11 °C (Comparison with the 6th Generation V Series EP3 Package)

Reduces inverter loss by 10% and chip temperature by 11 °C

2. Miniaturization

The application of the newly developed insulating board has improved the heat dissipation of the module. A smaller footprint of about 36% has been achieved by reducing power loss and suppressing heat generation compared with the previous product.

Application example) 36% reduction

3. High-temperature operation

Achieves continuous operation at 175 °C through chip optimization and improved package reliability and heat resistance.

- Up to 35% more output than the previous generation
- ΔT<sub> Junction</sub> power cycle capability improvement (twice as high as before)

### Product series (tentative) 1700 V /1200 V /650 V

| Package | External appearance | Size (mm) | 10A | 15A | 20A | 30A | 50A | 75A | 100A | 150A | 200A | 220A | 300A | 400A | 450A | 600A | 800A | 850A | 1000A | 1200A | 1400A | 1800A |
|---------|---------------------|----------|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|
| Small PIM | | 33.8 × 48.9 | 1200V | 650V | 900V | 1200V | | | | | | | | | | | | | | | | | |
| EconoPIM™ | | 56.7 × 48.0 | 1200V | 650V | 900V | 1200V | | | | | | | | | | | | | | | | | |

**Safety Precautions**

* Before using this product, read the “Instruction Manual” and “Specifications” carefully, and consult with the retailer from which you purchased this product as necessary to use this product correctly.
* The product must be handled by a technician with the appropriate skills.
